Professional Summary

Data Analyst with hands-on experience in SQL-driven data analysis and Python-based modelling, extracting and delivering meaningful insights from structured and transactional datasets. Proficient in data cleaning, exploratory data analysis, and statistical techniques to identify trends, patterns, and performance drivers. Experienced in building interactive dashboards and visual reports using Power BI and Tableau to drive business decision-making. Experienced in applying machine learning approaches such as regression, classification, and clustering to enhance analytical depth and predictive insights, with a consistent focus on accuracy, efficiency, and data-informed strategy.

Technical Skills

- Programming & Data Analysis:** Python (Pandas, NumPy, SciPy, Scikit-learn), SQL (CTEs, Window Functions, Indexing, Query Optimization).
- Databases:** MySQL, SQLite, Data Cleaning, ETL Pipelines.
- Machine Learning & Statistics:** Regression, Classification (Random Forest), Clustering, Hypothesis Testing, Feature Engineering.
- Data Visualization:** Power BI, Tableau, Matplotlib, Seaborn, MS Excel
- Deployment & Cloud:** Google Cloud, Render, Model Serialization (Pickle, Joblib)

Experience

Codalay Er Works

Jan 2025 – Dec 2025

Data Analyst Intern, Noida, India

- Automated large-scale data extraction using Python and Selenium, collecting structured lead data (22 attributes) and **reducing manual processing effort by 90%**.
- Performed data validation and cleansing (null handling, duplicate removal, schema alignment) before migrating into MySQL, executing multi-table joins to ensure referential integrity and **reducing data inconsistency errors by 95%**.
- Transformed raw lead data into structured analytical reports and visual dashboards using Python, uncovering funnel inefficiencies and high-performing segments that **improved sales pipeline efficiency by 25%**.
- Collaborated with sales and operations teams to implement data-driven targeting strategies, **achieving a 40% improvement in conversion rate, 30% increase in lead volume, and 20% revenue uplift**.

Project and Research

Jan 2026

Vendor Segmentation & Performance Analysis, Independent

- Built an end-to-end Python/SQLite pipeline to ingest and process a **1.4GB dataset (15M+ records)**, optimizing SQL CTEs and indexing to **reduce processing overhead by 60%**.
- Conducted Mann-Whitney hypothesis testing and Pareto analysis, revealing that **13.5% of vendors drive 80% of revenue while 83% of the portfolio over-purchased relative to sales in 2024**.
- Built a K-Means model to segment 10,500+ vendor-brand profiles into 4 performance tiers, **identifying structural underperformance risks** within specific Standard segments.
- Trained a **Random Forest classifier (98% accuracy)** to forecast vendor risk, identifying **Stock Turnover** as the **primary predictor (76% importance)** for proactive inventory management.
- Delivered a multi-page Power BI dashboard featuring executive KPI cards and ML-driven insights, **enabling actionable vendor profitability decisions** for non-technical stakeholders.

Olist Brazilian E-Commerce Analysis, Independent

Dec 2024

- Designed and optimized advanced SQL queries (CTEs, window functions, Pareto analysis) across **1.5M+ records in a 9 table relational schema** to analyze customer retention, seller performance, delivery impact, and payment behavior on a Brazilian e-commerce marketplace.
- Identified that **17.5% of sellers drive 80% of platform revenue** and **97% of customers never return**, revealing that even top performing categories like health & beauty retain under 4% of buyers – confirming churn is a structural marketplace problem, not a logistics or satisfaction failure.
- Quantified late delivery impact revealing an **8x spike in one-star reviews** beyond 7 days late, identifying the top 10 high-volume sellers responsible for **16% of all delays**, recommending targeted intervention corridors across problem states.
- Developed a multi-page Power BI dashboard and stakeholder report featuring a 2x2 Revenue vs Satisfaction matrix across 70+ categories, classifying computers as the highest untapped revenue opportunity at **\$25,400 revenue-per-seller** despite low market penetration.

Education

Lovely Professional University

Bachelor Of Technology in Computer Science and Engineering, **CGPA: 8/10**

2020-2024

Punjab, India

Coursework: Engineering Mathematics, DBMS, DSA, AI/ML, Probability and Statistics, Virtualization and Cloud Computing, Data Visualization, OS, Computer Network and Design, Industry Ethics.

Certification

- | | |
|--|------------|
| Data Science Certification with GenAI and Machine Learning, Career247. | Ongoing |
| Data Science and Machine Learning Internship Program, Edureka. | May - 2024 |
| Database Management Systems, Infosys Springboard. | Jul - 2023 |
